V13.0.1 Release Notes - LiveEdge® Node Node

2026-11-11
LiveEdge® Node - V13.0.1.168.3.3

Bundled Cloud Agent: V1.39.1

Improvements

> CPU Utilization Enhancements
- Product: Node
- Improved supervisor service performance to reduce unnecessary CPU utilization under certain conditions. These updates improve overall efficiency and help ensure expected resource usage during normal operation.

Known Behaviors

LiveEdge® Max 2 specifics:

> **Dual Ethernet**
- When using Dual Ethernet, SRT Listener output connections may be associated with either network interface, depending on route selection. In some cases, connections may appear on eth1 even when eth0 is expected. This behavior does not affect most workflows.

LiveEdge® Max specifics:

> **External Storage:**
- An SD card must be inserted prior to device boot in order for it to mount properly the first time. After being recognized from the initial mount, SD cards can be inserted/removed at any time and will then be recognized and mounted by the device.
