V1.21.0 Release Notes - LiveEdge® Cloud Control

2024-12-17 V1.21.0

Feature Additions

> **Cloud UI -** Does not require updating to latest Cloud Agent
- **User-configurable device metadata and metadata search**
  - Users are now able to add custom metadata key-value pairs to individual devices
    - This new interface is found at the top of the individual device configuration view
  - Users are now able to search all devices in their organization based on metadata
    - This new interface is located in the sidebar menu at Devices → Search
- **Browser specific settings**
  - User settings moved to a new "Browser Specific Settings" section in Settings
    → Manage Account
    - Enable Dark Mode
    - Hide Banners
  - Device list settings added to the new "Browser Specific Settings" section
    - Configure what columns show in device lists for the current browser
    - Choose between reactive columns or a horizontal scrollbar when not all columns can be shown

Fixes

> **Cloud UI -** Does not require updating to latest Cloud Agent
- Removed the "Restart Cloud Agent" COMMANDS action for Max devices until that functionality is supported
  - Today, a Max device's Cloud Agent can be restarted in Containers →
    Advanced
- Fixed various pagination issues when over 50 results displayed
- SRT URL updated to accept standard formatting of hostname syntax
- Force at least one manifest type to be chosen when saving HTTP Push outputs
- Update Zixi output defaults to match the local UI defaults
- Requesting new debug logs now updates without requiring a refresh of the dialog box

2024-11-26 V1.21.0

Feature Additions

> **Cloud Agent, API, and UI -** Does not require updating to latest Cloud Agent
  - **Licensable Container Directory Listings**
    - Containers listed in the LiveEdge Cloud Container Directory can now be associated with purchasable licenses, allowing monetization of third-party value-add functionality via Docker containers

Fixes

> **Cloud UI -** Does not require updating to latest Cloud Agent
  - Fixed instances where results lists would not allow advancing pages if multiple pages of results existed

2024-10-30 V1.21.0

Feature Additions

> **Cloud Agent, API, and UI -** Requires updating to Cloud Agent V1.21.0
  - **(Max only) Input failover setting**
    - Once LiveEdge V10.4 is released for Max firmware, users will be able to enable input failover on Max devices, allowing inputs to switch to black video and silent audio if no input is detected
  - **HTTP Push auto-retry setting**
    - Once LiveEdge V10.4 is released for both Node and Max firmware, users will be able to enable auto-retry for HTTP Push outputs, which attempts to reconnect to the streaming destination on failure to connect

Improvements and General Maintenance

> **Cloud API and UI** - Does not require updating to latest Cloud Agent
  - **General**
    - **Device functionality enforcement based on licensing**
      - All devices connected to LiveEdge Cloud will now enforce functionality and available features in line with licenses applied to devices
> **Cloud Agent, API, and UI -** Requires updating to Cloud Agent V1.21.0
  - **Docker container privileged mode licensing**

- – Devices must now be assigned the respective license that allows containers to be created with privileged mode
  - **Device serial license expiration date**
    - – Licenses assigned by device serial (as opposed to those assigned by org) now support expiration dates
  - **Exporting licenses**
    - – Users can now export the license file for each device in Cloud, allowing the manual installation of a license to a device not connected to Cloud once LiveEdge V10.4 is released for both Node and Max firmware
- > **Cloud UI -** Does not require updating to latest Cloud Agent
  - **Banner announcing changes to LiveEdge Cloud services**
    - – We will begin enforcing Cloud licensing as explained on our website, starting December 31, 2024. Current vCare Premium Support subscribers will be grandfathered into the LiveEdge Cloud Basic package, which includes all functionality before September 1, 2024. Those not subscribed to vCare currently have LiveEdge Cloud Free. As LiveEdge Cloud Pro features are rolled out, they will be available to all customers for demo purposes until December 31, 2024

Fixes

- > **Cloud API -** Does not require updating to latest Cloud Agent
  - Fixed an issue where license expiration emails were not being sent to users
