

V1.27.4 Release Notes - LiveEdge® Cloud Control

2025-02-27 V1.27.4

*** = Requires updating to the latest Cloud Agent Version**

Feature Additions

> Device-based Alerts*

- Users can now configure device-based alerts that offer an array of customizable triggers/thresholds as well as additional device statuses to alert on
- Current Org Alerts (currently under Alerts → Settings) will be deprecated and renamed to Legacy Alerts in a future update that expands device-based alerts to be configurable on Fleet and Org levels
- See our Help Center documentation on the new alerts [here](#)

> Docker logs streaming*

- Users can now view live Docker logs of containers running on devices to see real-time feedback when developing or troubleshooting Docker containers
- See our Help Center documentation on the Docker logs streaming [here](#)

Fixes

- > *Fixed a series of small gaps in network error handling robustness on the Cloud Agent to help prevent devices from being unreachable in Cloud if they experience network related edge case issues**
