

2025-05-27 V1.29.1

* = Requires updating to the latest Cloud Agent Version

Feature Additions

- > **HTTP Push to AWS MediaPackage**
 - Users can now configure HLS streams to AWS MediaPackage
- > **Docker container port protocols**
 - Users can now select between TCP and UDP for port protocols used by Docker containers
- > **Cloud configuration of Docker containers**
 - Docker container developers can now specify a config.json file to be used by LiveEdge Cloud, enabling configuration of containers via the LiveEdge Cloud UI.
 - Developers that wish to take advantage of this functionality can reach out to a Videon representative.

Fixes

- > Increased the timeout for log requests to allow for larger log files to be processed
- > Improved error handling for device agent connectivity to LiveEdge Cloud
