

2025-07-15 V1.29.2

* = Requires updating to the latest Cloud Agent Version

Feature Additions

- > **Added search functionality to license management views**
 - Users can now search licenses by various pieces of information such as license name, expiration date, and more

General Improvements

- > **"Last State Update" column added to device list options**
 - Users can now select the "Last State Update" column to be shown in device list views. This setting is located in user account settings.
- > **Alphanumeric sorting added to Fleet Multi-View**
 - Users can now sort Fleet Multi-View by device name or input name
- > **Targeted event filtering added to the Recent Fleet Events list option**
 - Users can now select which specific devices they want to view in their Recent Fleet Events lists
- > **Device workflow view added to Device Info page for individual devices**
 - Users can now see the device input(s) → encoder(s) → output(s) workflow view originally added in Fleet Monitor from each individual Device Info page
- > **Input preview optimizations**
 - Input previews now scale more smoothly across different screen sizes, improving usability on any device

Fixes

- > Fixed Docker container configurations being deleted on software update*
- > Fixed Metrics Explorer data viewer to properly represent all time periods of data
- > Fixed issue where removing Access Token caused the rest of the HTTP Push configuration for the Media Package integration to reset
- > Prevented event spamming for data encoders configured in device alerts*
- > Fixed issue where license entitlements were not overlaying one another as expected
