

V11.3.0 Release Notes - LiveEdge® Max & Node

2025-11-10

LiveEdge® Max V11.3.0.500

LiveEdge® Node V11.3.0.150.3

Bundled Cloud Agent: V1.33.2

Features

- > **HTTP Push Support for Amazon S3**
 - **Product: Max & Node**
 - Added support for HTTP Push outputs to send directly to Amazon's S3 storage for file storage in the cloud.

- > **Software Input Support**
 - **Product: Max**
 - Added support for software inputs like RTSP. This opens the door for future integrations with USB cameras, AI overlays, and more flexible input sources. (*With appropriate licensing.)

Bug Fixes / Improvements

- > Bug Fix for Output Retry Logging
 - Product: Max
 - Improved output retry logic to mitigate excessive log entries under certain network conditions.

- > SDI Audio Channel Detection Improvement
 - Product: Max
 - Improved detection and handling of SDI audio channels.

- > Bug Fix for Bitrate Setting Persistence
 - Product: Max & Node
 - Fixed an error where changes to the maximum bitrate were not saving correctly in the local web UI or matching entitlement configurations.

- > Bug Fix for SRT and RTSP entitlement handling
 - Product: Max & Node
 - Fixed a bug related to single-input entitlement handling that could prevent the attachment or removal of audio encoders from SRT and RTSP outputs.

Known Behaviors

LiveEdge® Max specifics:

- > **External Storage:**
 - An SD card must be inserted prior to device boot in order for it to mount properly the first time. After being recognized from the initial mount, SD cards can be inserted/removed at any time and will then be recognized and mounted by the device.
