videon

2024-07-30 V4.0

Features

> Support for LiveEdge® Max device IP address discovery

Bug Fixes / Improvements

> Discovery App certified by Apple on MacOS
> Uses SSDP/MDNS protocol to discover Videon devices on the LAN

Known Behaviors

> WiFi does not support SSDP/MDNS correctly. We recommend connecting the laptop to the local network via Ethernet when using the Discovery app for best results.
> Devices can take 15 seconds to appear on the app when first launching.
> Devices will timeout or go offline after ~15 seconds of inactivity.

2020-01-28 V2.0

Features

> Added support to discover Videon encoders using the V2.0 REST API. Note: encoders on the V1.0 REST API will still be discoverable on this Discovery App as well.

Known Issues

> Some unicode characters don't show correctly on the Discovery App.

V1.4

Features

> Removed refresh button and replaced with a spinning gif. The Discovery App now constantly checking for devices being added or removed.
> Troubleshooting text updated to reflect current support infrastructure.

Bug Fixes

> Device no longer shows id when there is an assigned name.
> Adjusted app to stop hogging CPU after a while.
> Fixed a memory leak in the Linux version of the app.
